

TREATMENT FOR TENDON AND PLANTAR FASCIA PAIN

DO YOU HAVE PATIENTS WITH CHRONIC TENDON OR PLANTAR FASCIA PAIN?

WHAT DO YOU RECOMMEND WHEN THEY ARE NOT BETTER AFTER 3 MONTHS?

Recommend Tenex Health TX[®]

A simple, minimally invasive procedure for those suffering with:

- Shoulder Tendinosis
- Lateral or Medial Epicondylitis
- Gluteal Tendinosis of the Hip
- Patellar Tendinosis
- Achilles Tendinosis
- Plantar Fasciosis

THE IDEAL PATIENT

- ✓ Pain for over 3 months - chronic
- ✓ Other treatments and conservative measures have failed (RICE, PT, maybe even cortisone)
- ✓ Presents point tenderness (can easily identify location of pain)

We offer an image-guided, one-time minimally invasive procedure using Tenex Health TX[®] technology that is designed to precisely cut and remove the degenerated soft tissue which is the source of the chronic pain - while leaving the healthy tissue alone and stimulating a healing response. This allows patients to return more quickly to their normal daily routine than with a traditional open surgery. Tenex Health TX[®] is based upon advanced technology developed in collaboration with the Mayo Clinic.

Transform your treatment path for patients with Chronic Tendon or Plantar Fascia Pain:

Recommend Tenex Health TX®

Historically, conservative treatment included options to treat only symptoms and not the disease. The Tenex Health TX® System allows us to treat the source of Chronic Tendon Disease by precisely cutting and removing damaged tissue without disturbing healthy tendon.

Enhance your physician-patient relationship by giving your patient an opportunity to get back **to life with a definitive, minimally invasive procedure to remove** Chronic Tendon Disease. Refer your patients to:
